

Minutes

Wednesday, June 12, 2026

1 General

Opening: The meeting started at 11:16.

Present: Kantuta (chair), Jonas, Tarana & Sohrab (minute taker)

Absent: -

2 Old Business - Minutes of last meeting

2.1 Approval of minutes of last meeting

The minutes of last meeting were approved.

2.2 Old action points

- ✓ **Sohrab** Finish Friday's data analysis .
- × **Sohrab** Who, what, when filled in.
- ✓ Sohrab Begin writing theory script for animation + poster
- ✓ **Jonas** Make plots for breakup length vs Weber number for wednesday's data
- ✓ **Everyone** Redo Friday's measurements
- ✓ **Tarana** Finish Wednesday's data analysis
- × **Sohrab and Jonas** Organize github repository
- ✓ **Kantuta** Make photos and videos of the team members in the lab.
- × **Kantuta** First sketch of poster
- × **Kantuta and Tarana** Organize onenote

3 New Business

1. Minutes last meeting

2. Reading rubric

We need to improve our ownership, i.e. we need to come up with our own ideas more. We could also ask for feedback more.

We need to be more clear about how we divide our tasks.

3. Our goals

4. Brainstorming about poster

posternumber and QR-code for the video needs to be on the poster.

research question: What is the influence of changing the external parameters as well as the characteristic parameters of different fluids on the breakup lengths of their jets.

We haven't started working on the poster yet, but we are going to work on it while looking at the rubric under the criteria of two points. Next week we will start working on the poster.

Things to work on according to the rubric of the poster:

layout: appealing design, easy to follow, the layout supports the message, creative use of layout elements.

content: concise and convincing, all key components (context, methods, research question, results, discussion) are present, data is clearly shown (figures, tables, formulas), citations.

discussion: adds value, all questions clearly and thoroughly answered with details, engaging.

5. Brainstorming about video

Kantuta wants videos and photos of us in the lab.

The animation will explain the physics behind jet breakup (surface tension etc.).

Things to work on according to the rubric of the animation:

complementary to the poster with extra information, targeted audience is our year peers, a bit of humor, appealing in design, manim.

6. Measurements and data analysis

We won't use the red needle because its diameter is very similar to the white needle. We will analyse the data from today, i.e. the measurements we repeated from 05-06-2026. If they don't match we will continue the measurements tomorrow.

7. Any other business?

4 New action points

To be finished before 1-06-2026.

- **Sohrab and Jonas** organize our github repository.
- **Sohrab** Finish writing theory script for animation + poster
- **Kantuta and Tarana** organize our onenote.

- **Everyone** Finish big needle water measurements and 0.2 mm water and ethanol measurements
- **Jonas** Prepare hand in draft for manim animation
- **Kantuta** Finish poster draft

5 Closure

- **Next meeting:**
- **Closure** The meeting ended at 12:00
