

# Minutes

Friday, June 5, 2026

## 1 General

**Opening:** The meeting started at 09:11.

**Present:** Sohrab (chair) (S), Tarana (T), Jonas (J), Rosa (R), & Kantuta (minute taker) (K)

**Absent:** -

## 2 Old Business - Minutes of last meeting

### 2.1 Approval of minutes of last meeting

Last meeting was our first brainstorm, no official minutes were taken.

### 2.2 Old action points

- ✓ **Everyone** Read first 8 pages of literature provided for project.
- ✓ **Tarana** Read off average value from breakup length of the current data. (Data analysis)
- ✓ **Jonas** Data analysis of the 3rd of June.
- ✓ **Sohrab** Add Clara to Github.

## 3 New Business

### 1. Analyze data

J shows the graph of the water breakup length with the Weber number.

R says the graph shouldn't be a line but points for each measurement, we should add the new points of another solution to the same graph so we can analyze what changes with needle width, etc.

### 2. Research question

S asks what a good research question looks like.

R says it's really up to us but we should most importantly think about how we will present the data. 'Don't sell your work for cheap prices. You can do very important science but if you don't present it nicely, no one will care.'

### 3. Tank refill problem

K explains the problem we had yesterday with a higher flow rate at the same pressure when we refill the tank.

T thinks maybe we didn't mix it well before we refill the tank.

R says we should write down everything we think about why this happens. We also shouldn't let the tank get empty. We should try to keep the points we for sure are correct and not use the ones we aren't sure of. Due to limited time we will continue with another nozzle and measure the properties of the mixture, if there is time left we could do them again.

### 4. Any other business?

R is correcting our mistakes on the pdf Sohrab sent. Explains types of flow rate, there was a mistake on the flow rate formulas. We should put all the units in SI. Units in calculation also are in g/min, should be in kg/s.

K asks what Rosa expects from us schedule wise. Should we be in the lab from 9 to 5?

R says we should divide our time between the lab and the analysis. We could do half a day lab, half analysis, or full day lab other full day analysis. It's up to us.

## 4 New action points

- **Sohrab** Who, what, when filled in.
- **Kantuta** Send availability form for next week.
- **Everyone** Find out what is wrong with measurements 04/06/26.
- **Everyone** Download manim.

## 5 Closure

- **Wednesday, June 10, 2026** Chair: Tarana Minute taker: Jonas  
Without Rosa.
- **Closure** The meeting ended at 9:31.
